## DC: Reactome GSEA, P4 vs Control

P4 minus Control | solid: pathway FDR < 0.05 | up to 8 labels per cluster and direction

Plain labels were pre-selected by name (inflammation, stress, cell death); italic labels are the lowest-FDR significant terms. Only main pathways are labelled: fgsea::collapsePathways groups significant terms explained by a more significant pathway under it. BH FDR within each cluster, collection and contrast; no adjustment across clusters.
Pathways tested: cluster 1 857, cluster 2 780, cluster 3 699.
